

EE36 Series

Transmitters for Moisture Content in Oil

E+E Transmitter Series EE36 are specially designed for the measurement of water content in oil. They are certified in accordance with the regulations of the "Germanischen Lloyd (GL)" and therefore can be utilized in the maritime field as well. The Series EE36 is ideal for online monitoring of moisture in lubrication or insulation oil, which is very important for the long-term performance and adaptive maintenance of plant and machinery. For instance, moisture affects dramatically the insulation characteristics of electrical transformer oil and therefore continuous monitoring is extremely important.

Humidity measurement in oil

Similar to the humidity in the air, the water content in an oil can be described by the absolute value in ppm or by the relative value a_w :

- ppm (mass of water / mass of oil)
- a_w (actual water content as fraction of the water content in the saturated oil)

$a_w = 0$ corresponds to water-free oil, while $a_w = 1$ describes fully saturated oil. a_w measurement with EE36 transmitter series is based on the outstanding long term stability and resistance to pollution of the E+E capacitive sensor elements series HC.

Product Versions

The physical quantities measured are water activity a_w and temperature T. With these quantities EE36 calculates the water content (ppm) in mineral transformer oils. Calculation of water content in non-mineral transformer oils and lubrication oils can be accomplished by downloading specific parameters of the oil. The measured and the calculated values are available on two free scaleable and configurable analogue outputs. In addition, an optional relay output can be used for alarms and process control.

Installation

The sensing probe is designed for inline monitoring and can be placed directly in the oil, at pressures up to 20bar (300psi). In addition to direct mounting of the sensing probe, a ball valve installation provides mounting and removal of the probe without interrupting the process.

Easy Calibration and Adjustment of EE36

The user can easily readjust or calibrate the transmitter by using either a simple procedure with two push buttons on the printed circuit board or the configuration software.

Software Tools

The configuration software is included in the scope of supply and allows an easy and fast configuration of the analogue outputs and of the alarm and control thresholds. Further features of the configuration software are adjustment and calibration of the outputs and service operations such as replacement of the sensing elements or of the entire sensing probe.

Features of EE36

Measurement of a_w and T at pressure up to 20bar (300psi)	✓
Calculation of water content in ppm for mineral transformer oil	✓
Two free scaleable and configurable analogue outputs	✓
Probe cable length up to 20m (66ft)	✓
Easy on site adjustment and calibration of a_w and T outputs	✓
LED indication for operation and sensing probe status	✓
User configuration of the instrument with PC via RS232 interface	✓
Configuration software	✓
Display of a_w , T and water content with MIN/MAX function	optional
Two free configurable relays outputs	optional
Pluggable sensing probe	optional
Connector for power supply and outputs	optional

Integrated power supply

A power supply, integrated in the back module of the housing, can be ordered optionally (100...240V AC, 50/60Hz; ordering code V01). The power supply V01 is available for both polycarbonate and metal housing and comes standard with two plugs for supply and outputs to allow an easy connection.

Installation Example

Housing:

polycarbonate housing

metal housing

For use in harsh industrial environments the EE36 series is available in a robust metal housing.

Model:

EE36-xEx

Remote probe for T -40...180°C (-40...356°F)
and pressure-tight up to 20bar (300psi)
probe material: stainless steel

minimum installation depth

maximum installation depth

ball valve installation (pressure-tight up to 10bar/145psi)

fixed installation (pressure-tight up to 20bar/300psi)

1) refer to the working range of the humidity sensor.

2) can be easily changed by software

3) ppm output is valid in the range 0...100°C (32...212°F)

4) no data output

5) not for polycarbonate housing or integrated power supply (V01)

*) The accuracy statement includes the uncertainty of the factory calibration with an enhancement factor k=2 (2-times standard deviation). The accuracy was calculated in accordance with EA-4/02 and with regard to GUM (Guide to the Expression of Uncertainty in Measurement).
